EDUCATION

Georgia Institute of Technology – Atlanta, GA

Jan. 2027 – Dec. 2028

M.S. in Analytics (online)

Wofford College – Spartanburg, SC

Aug. 2022 – May 2026

B.S. in Computer Science | Minor: Business | Concentration: Data Science

GPA: 3.43

Dean's List | *S.C. LIFE Scholarship* | *Study Abroad: Vienna, Austria (Fall 2024)*

TECHNICAL SKILLS

- **Languages:** Python, SQL, R, JavaScript, TypeScript, HTML, CSS
- **Libraries & Frameworks:** Pandas, NumPy, scikit-learn, statsmodels, Matplotlib, Tableau, Power BI, React
- **Tools & Platforms:** Git, Docker, Jupyter, Azure, PostgreSQL, MySQL, VSCode, GitHub

EXPERIENCE

Software Engineering Intern, World Finance

May 2026 – Aug. 2026

- Developed and shipped new features and bug fixes for production web applications serving 1M+ users using React, TypeScript, Git, SQL, collaborating with a cross-functional team of 20+ engineers to translate business requirements into working software.
- Used Azure DevOps to manage sprint work, track tickets, and coordinate code reviews and deployments as part of a 20+ person agile development team supporting a large-scale financial services platform.
- Wrote SQL queries to create, validate, and profile test datasets, ensuring data quality and consistency across the development and testing workflow.

Undergraduate Research - Data Science & Analytics, Wofford College

June 2025 – Aug. 2025

- Built an ETL pipeline (Python, Tesseract, OpenCV) to extract tabular data from scanned NYSE directories (1868–1933) into structured CSV datasets.
- Cleaned and standardized firm name and location data using Python, resolving inconsistencies from OCR errors to ensure accurate downstream analysis.
- Performed exploratory data analysis and built visualizations (PolicyMap, Datawrapper) to support economic research on U.S. financial market access prior to the Great Depression.

PROJECTS

ER Admissions Forecasting – Independent Project

Python, Pandas, Excel, Streamlit, NumPy, Plotly, Matplotlib, Jupyter, VS Code

- Emergency Rooms face unpredictable patient volumes that often lead to under or over-staffing, increasing costs and patient waiting times. I addressed this challenge by analyzing 10+ years of *NHS England A&E time-series data* to identify demand patterns.
- Built a data pipeline to clean, transform, and feed data into forecasting models (SARIMAX, Prophet, XGBoost) to generate predictions.
- Improved prediction accuracy by 43% over baseline (MAPE 1.8% vs 3.1%) and delivered results through an interactive *Streamlit* dashboard with KPIs, forecasts, and downloadable reports.

QR Check in System – Group Project | Agile Scrum

Python, PostgreSQL, React, TypeScript, FastAPI, Git, Tailwind, Docker, GitHub, Vitest, Pytest

- Developed a full stack event management platform using Python, FastAPI backend, PostgreSQL database, and a React and TypeScript frontend. Containerized with Docker and includes role-based access control, QR code check ins, recurring events, CSV exports, and comprehensive audit logging.
- Built API routes, database models, Auth0 based SSO authentication and authorization logic, reusable interface components, and automated tests on both client and server while collaborating in a four-person team.
- Wofford College plans to adopt the system and integrate it into campus workflows so professors and staff can create events, manage attendance, view analytics, and streamline check-ins for classes, meetings, and student activities.
